WILLIAM DAFELDECKER
Brick, NJ 08723 | +1 732 551 7359 | williamdafeldecker@gmail.com | Active Secret Security Clearance

PROFESSIONAL SUMMARY

Accomplished Senior Software Engineer with over 15 years of experience designing, developing, and migrating enterprise-scale web applications. Proven track record leading high-priority engineering projects for federal and state government entities. Technical expert in .NET Core ecosystems, modern JavaScript frameworks (React, TypeScript, Vue.js, Node.js), and enterprise CMS platforms (Drupal).

TECHNICAL SKILLS

- **Languages**: TypeScript, JavaScript, C#, Python, PHP, HTML5, CSS3, SQL
- **Frameworks & Libraries**: React, Vue.js, Node.js, Next.js, .NET Core, Blazor, Razor, WorldWind.js
- **Testing Tools:** Playwright, Vitest, xUnit
- **Platforms & Tools**: Drupal, WordPress, Acquia Cloud Platform, Git, REST APIs, DNS, Linux
- **Compliance & Methodology**: SDD/SRS Architecture, NIST SP 800-53 / 800-171, DoDI 8500.01 / 8510.01 (RMF), Section 508 Accessibility

PROFESSIONAL EXPERIENCE

Software Engineer

Teksystems - Remote | August 2026 – October 2026 (3 month contract)

- Engineer modular, strictly typed React applications by breaking down complex features into reusable TypeScript components and hooks.
- Provide full-stack support by implementing backend logic and enhancements within Java environments.
- Support and leverage enterprise CI/CD infrastructures, working alongside Jenkins pipelines to automate frontend test validations, component builds, and continuous deployment tasks.
- Utilized AWS WorkSpaces to architect, test, and deploy software applications.

Senior Software Engineer

CommIT Enterprises - Remote | October 2024 - August 2026

- Architect high-level and detailed software designs (SDD) from federal SRS requirements, translating architectures into actionable GitLab Epics and Issues to drive concurrent development across multiple sub-teams.
- Engineer features and resolve bugs across defense applications utilizing C#, Blazor, Razor, JavaScript, and TypeScript.
- Develop and maintain a hybrid online/offline global map library using WorldWind.js, packaging TypeScript and C# into a custom NuGet package to seamlessly integrate situational awareness data into a .NET ecosystem.
- Establish robust testing workflows by implementing Playwright for end-to-end automation and xUnit for backend service validation, ensuring application stability and code integrity.
- Modernize application data flows by linking legacy backend infrastructure directly to a modern application, ensuring comprehensive system data coverage.
- Lead development of modular project components, NuGet packages, and JS libraries, improving development workflows across teams.
- Design and maintain Interface Control Documents (ICDs) to seamlessly blend siloed, legacy military applications with modern, microservice-based platforms.
- Utilize advanced reverse engineering techniques to decipher and reconstruct poorly documented legacy features, closing critical capability gaps.
- Cultivate team growth and mentor developers through code reviews and merge requests, establishing high standards for code integrity, security, and architecture.

Senior Software Developer

Tristar - Remote | April 2022 - October 2024

- Engineered web applications utilizing Javascript frameworks such as Vue.js (migrated from Vue 2 to Vue 3) and Blazor for front-end interfaces and .NET/C# back-end services.
- Leveraged deep expertise in core JavaScript fundamentals, asynchronous programming (promises, async/await), and event loop architectures to optimize browser rendering and client-side performance.
- Architected comprehensive automated testing suites utilizing xUnit and Vitest for rapid backend and frontend unit testing, and Playwright for cross-browser end-to-end validation.
- Spearheaded mentorship initiatives for junior engineers, utilizing targeted code reviews and pair programming to accelerate onboarding and align team practices with enterprise coding standards.

Information Technology Analyst 3 (Web Project Lead & Lead Developer)
New Jersey Judiciary - Trenton, NJ | November 2015 - April 2022

- Served as the primary technical project lead for the enterprise-wide migration of NJCourts.gov into Drupal, governing all stages of technical planning, architecture design, and data preparation.
- Led the migration to the Acquia Cloud Platform to offload infrastructure maintenance, ensuring long-term system support and stability.
- Integrated Playwright automated testing scripts into the core deployment pipeline to validate UI functionality, document workflows, and state-level compliance standards during major application updates.
- Researched, designed, and deployed a modern decoupled architecture, establishing a high-performance React.js front end integrated with a headless CMS setup to improve content delivery and UI responsiveness.
- Trained internal teams on Drupal development (PHP and JavaScript) and content management best practices to streamline future site updates.
- Enforced strict state and federal accessibility standards (Section 508 / WCAG) across public-facing properties by establishing automated compliance audits using SiteImprove and Google Lighthouse.
- Established and maintained the team's core engineering documentation, defining standard operating procedures (SOPs) for architecture execution and web implementation.

Freelance Web Developer / Consultant
Self-Employed - Brick, NJ | July 2012 – Present

- **New Jersey Judiciary**: Re-engaged as a specialized technical consultant following full-time employment to provide continuous development, data optimization, and feature enhancements.
- **NY Parks & UT Southwestern Medical Center**: Delivered comprehensive Drupal migration blueprints, defining the data-mapping strategies and core development tasks to launch the migration process.
- **Small Commercial Business Sites**: Architected and delivered responsive single-page applications (SPAs) leveraging React.js, Next.js, and Vue.js. Designed WordPress sites, featuring custom administrative portals, optimized React hooks for state management, and dynamic content updates. Utilized custom Python scripts to automate data migration into the new site.

Military Service
US Navy - E5 / Electronics Technician Second Class | 6 years Honorable Service | July 2005 - July 2011

- Supervisor for Combat Electronics work center, managing personnel while troubleshooting and performing maintenance and repairs to vital electronics.
- Electronic Support Supervisor - involved knowledgeable management of division during normal operations and provide fast reaction to casualty control procedures during emergency conditions.

Education
Bachelor's degree in Information Technology
Thomas Edison University - Trenton NJ

Certifications

- Foundational C# with Microsoft Certification
